Eligibility for En	glish 126			ertificate iii.		
			(10)CS	U	Baccalaureate:	X
Eligibility for En	glish 125		(11)Rej	peatable: (A	course may be repeated	
MATH 103 - IN	ΓERMEDIATE ALGEBRA		thr	ee times)		0
ENGL 1A - READING AND COMPOSITION						
(7) Pre-requisites(red	quires C grade or better):					
Corequisites:						
	tion: er, physical and chemical char ions, gas laws, types of chemic					

reduction reactions, equilibrium. Recommended for students planning to take Chemistry 1A or 3A who do not have a strong background in chemistry.

II. COURSE OUTCOMES:

(Specify the learning skills the student demonstrates through completing the course and link critical thinking skills to specific course content and objectives.)

Upon completion of this course, students will be able to:

- A. Demonstrate a working knowledge of the periodic table in such ways as deriving inorganic chemical formulas and balanced chemical equations.
- B. Write the name of inorganic and molecular compounds from the formulas.
- C. Use dimensional analysis and stoichiometry to solve for an unknown parameter of density, volume, mass, pressure, temperature, molar mass and concentration.
- D. Apply the definition of acids and bases and understand the concept of pH.
- E. Understand basic safety procedures in the chemical laboratory and demonstrate laboratory skills in the use of the analytical balance, conducting experimentation and proper glassware handling.

III. COURSE OBJECTIVES:

(Specify major objectives in terms of the observable knowledge and/or skills to be attained.)

In the process of completing this course, students will:

- A. Write correct symbols for the elements and using the Periodic Table write correct formulas for inorganic compounds.
- B. Gain an understanding of how to identify molecular and ionic compounds and the specific bonding types that occur in these
- C. Set up and balance chemical equations.
- D. Gain an understanding of the mole and mass calculations using the stoichiometry in the balanced equation.
- E. Identify molecular and ionic compounds.
- F. Gain an understanding of what the ideal gas law and combined gas law is and how this can be used to calculate quantities for all the variables in the equation, such as pressure, volume, moles and temperature.
- G. Identify the names and symbols and gain a working knowledge of the most common elements on the periodic table and demonstrate this in such ways as deriving inorganic chemical formulas and balanced chemical equations.
- H. Learn to write the names of inorganic and molecular compounds and apply the basic rules for writing chemical formulas and demonstrate this by correctly naming and writing out chemical formulas.
- Use dimensional analysis to convert from the English to the metric system for measurements that are common to chemistry such as mass, volume, formula weights, denisty, linear measurements and temperature.
- J. Learn to balance chemical equations, and use both molecular and net ionic forms of the equation and use stoichiometry to predict quantities of products given reactant amounts.
- K. Describe covalently bonded compounds using Lewis structures.
- L. Apply the definition of acids and bases to the understanding of pH and acid related problems.
 M. Demonstrate safe laboratory skills by using the laboratory equipement such as analytical balance, thermometer, and safely conducting direcected experimentation by the proper use of glassware and other lab equipement.

IV. COURSE OUTLINE:

Lecture Content:

- A. An Introduction to Chemistry
- 1. History
- 2. Relationship with other Sciences
- 3. The Scientific Method
- B. Standards for Measurement
- 1. Mass and Weight
- 2. Significant Figures
- 3. Rounding Off
- 4. Scientific Notation
- 5. The Metric System
- 6. Dimensional Analysis
- 7. Temperature and Volume Measurements

C. Classification of Matter

- 1. Physical States of Matter, Substances and Mixtures
- 2. Names and Symbols of the Important Elements
- 3. Metals, non-Metals and Metalloids
- 4. Compounds
- D. Properties of Matter
- 1. Physical and Chemical Properties of Matter
- 2. Conservation of Mass.
- 3. Heat and Conservation of Energy
- E. Early Atomic Theory and Structure
- 1. Dalton's Atomic Theory
- 2. Discovery of Ions
- 3. Subatomic Particles
- 4. Relationship between Atomic Number and Atomic Mass

- F. Nomenclature of Inorganic Compounds
- 1. Common Names and Systematic Names
- 2. Binary and Ternary Compounds, Salts, Acids and Bases
- G. Quantitative Composition of Compounds
- 1 The Mole Concept, and Molar Mass of Compounds
- 2. Percent Composition
- 3. Empirical Formula versus Molecular Formula
- H. Chemical Equations.
- 1. Writing and Balancing Chemical Equation.
- 2. Types of Chemical Equations
- 3. Heat: Endothermic and Exothermic Reactions
- I. Calculations from Chemical Equations
- 1. Introduction to Stoichiometry: the Mole-Mass Ratio Method
- 2. Limiting Reactant and Yield Calculations.
- J. Chemical Bonds: The Formation of Compounds from Atoms
- 1. The Ionic Bond: Transfer from Electrons from one Atom to another
- 2. The Covalent Bond: Sharing of Electrons
- 3. Electro-negativity
- 4. Drawing Lewis Structures
- K. The Gaseous State of Matter
- 1. General Properties of Gases
- 2. The Laws of Boyle, Charles, and Gay-Lussac
- 3. Standard Temperature and Pressure
- 4. Avogadro's Law
- L. Water and the Properties of Liquids
- 1. The structure of the Water Molecule
- 2. The Hydrogen Bond
- M. Solutions.
- 1. Types and General Properties of Solutions
- 2. Factors related to Solubility
- 3. Concentration Calculations
- N. Chemical Equilibrium
- 1. Rates of Reactions
- 2. The Principle of Le Chatelier
- 3. Effect of Catalysts, Temperature, and Pressure on Chemical Equilibrium

Lab Content:

- A. Introduction to safety. safety agreement and safety quiz.
- B. Instrumental measurements.
- C. Physical properties and chemical properties of matter.
- D. Families of elements.
- E. Naming molecular and ionic compounds.
- F. Empirical formulas of compounds.
- G. Analysis of alum, a salt used as styptic.
- H. Precipitating calcium phosphate
- I. Molecular models, working with the molecular modeling box and understanding covalent bonding.
- J. Analysis of salt water.
- K. Generating hydrogen gas, an alternative fuel.
- L. Analysis of vinegar.
- M. Electrical conductivity of aqueous solutions.

V. APPROPRIATE READINGS

Reading assignments may include but are not limited to the following:

- A. Sample Text Title:
 - 1. Recommended Zumdahl, S. Z., DeCoste, D. J. *Introductory Chemistry: A Foundation*, ed. Seventh Charles Hartford, 2010,
 - 2. Recommended Peters, Cracolice *Introductory Chemistry, An Active Learning Approach*, ed. 4th Thomson, Brooks/Cole, 2009,
 - 3. Recommended Hein & Arena Foundations of College Chemistry, ed. 11th Wiley, 2004,

	Readings	
В.		

Global or international materials or concepts are appropriately included in this course
Multicultural materials and concepts are appropriately included in this course

If either line is checked, write a paragraph indicating specifically how global/international and/or multicultural materials and concepts relate to content outline and/or readings.

VI. METHODS TO MEASURE STUDENT ACHIEVEMENT AND DETERMINE GRADES:

Students in this course will be graded in at least one of the following four categories. Please check those appropriate. A degree applicable course must have a minimum of one response in category A, B, or C.

A. V	A. Writing Check either 1 or 2 below			
X	X I. Substantial writing assignments are required. Check the appropriate boxes below and provide a written description in the space provided.			
	2. Substantial writing assignments are NOT required. If this box is checked leave this section blank. For degree applicable courses you must complete category B and/or C.			
X	a) essay exam(s)	X	d) written homework	
	b) term or other paper(s) e) reading reports			
X	c) laboratory report(s)		f) other (specify)	

Required assignments may include but are not limited to the following:

Laboratory reports and essay questions on exams.

B. Problem Solving				
Computational or non-computational problem-solving demonstrations, including:				
X	a) exam(s)	X	d) laboratory reports	
X	b) quizzes		e) field work	
X	c) homework problems		f) other (specify):	

Required assignments may include but are not limited to the following:

Homework problems are assigned from the textbook.

C. Skill demonstrations, including:			
a) class performance(s)	c) performance exams(s)		
b) field work	d) other (specify)		

Required assignments may include but are not limited to the following:

D. C	D. Objective examinations including:				
X	a) multiple choice	X	d) completion		
X	b) true/false		e) other (specify):		
X	c) matching items				

COURSE GRADE DETERMINATION:

Description/Explanation: Based on the categories checked in A-D, it is the recommendation of the department that the instructor's grading methods fall within the following departmental guidelines; however, the final method of grading is still at the discretion of the individual instructor. The instructor's syllabus must reflect the criteria by which the student's grade has been determined. (A minimum of five (5) grades must be recorded on the final roster.)

If several methods to measure student achievement are used, indicate here the approximate weight or percentage each has in determining student final grades.

Exams (5) 45% Final 15% Quizzes, homework 10% Participation 5% Laboratory 25%

VII. EDUCATIONAL MATERIALS

For degree applicable courses, the adopted texts, as listed in the college bookstore, or instructor-prepared materials have been certified to contain college-level materials.

Validation Language Level (check where applicable):	College-Leve YES	el Criteria Met NO
Textbook Reference materials Instructor-prepared materials Audio-visual materials	X X X X	
Indicate Method of evaluation: Used readability formulae (grade level 10 or higher) Text is used in a college-level course Used grading provided by publisher Other: (please explain; relate to Skills Levels)		
Computation Level (Eligible for MATH 101 level or higher where applicable) Content	X	
Breadth of ideas covered clearly meets college-level learning objectives of this course Presentation of content and/or exercises/projects: Requires a variety of problem-solving strategies including inductive and deductive reasoning. Requires independent thought and study Applies transferring knowledge and skills appropriately and efficiently to new situations or problems. List of Reading/Educational Materials Recommended - Zumdahl, S. Z., DeCoste, D. J. Introductory Chemistry: A Foundation, ed. Seven Recommended - Peters, Cracolice Introductory Chemistry, An Active Learning Approach, ed. 4th Recommended - Hein & Arena Foundations of College Chemistry, ed. 11th Wiley, 2004,		
Comments:		
This course requires special or additional library materials (list attached). This course requires special facilities: Chemistry Lab Attached Files:		

	e skills listed are those needed for eligibility for English 125, 126, and Math 101. These					
	ish 252, 262, and Math 250. In the right hand column, list at least three major basic skills					
	e and check off the corresponding basic skills listed at the left.					
(eligibility for English 126)	1. Students are required to read a college-level textbook with reasonably sophisticated					
(as outcomes for English 262)	vocabulary.					
X Using phonetic, structural,	2. Students are required to read lab manuals, comprehend a stepwise lab procedure and					
contextual, and dictionary	understand lab safety precautions.					
skills to attack and understand						
words.	3. Basic analytical skills are required for good comprehension of dense readings.					
Applying word analysis skills to						
reading in contextX Using adequate basic functional						
vocabulary skills.						
X Using textbook study skills and						
outlining skills.						
Using a full range of literal						
comprehension skills and						
basic analytical skills such as						
predicting, inferring,						
concluding, and evaluating.						
(eligibility for English 125)	1. Students are required to write answers with complete English sentences.					
(as outcomes for English 252)						
V W''	2. To understand the difference between an element, a compound and a mixture					
X Writing complete English	students need to write well organized and coherent prose.					
sentences and avoiding errors most of the time.	3. In lab reports students need to combine written observations into a conclusion, which					
X Using the conventions of English	necessitates the ability to think and write systematically and write well organized prose.					
writing: capitalization,						
punctuation, spelling, etc.						
Using verbs correctly in present,						
past, future, and						
present perfect tenses, and using						
the correct forms of						
common irregular verbs.						
X Expanding and developing basic sentence structure with						
appropriate modification.						
Combining sentences using						
coordination, subordination,						
and phrases.						
Expressing the writer's ideas in						
short personal papers						
utilizing the writing process in						
their development.						
Check the appropriate spaces.						
Eligibility for Math 101 is advisory						
X Eligibility for English 126 is advis						
X Eligibility for English 125 is advisory for the target course. If the reviewers determine that an advisory or advisories in Basic Skills are all that are necessary for success in the target						
course, stop here, provide the required signatures, and forward this form to the department chair, the appropriate associate dean,						
and the curriculum committee.						
	CONTENT REVIEW					

REQUISITES Subject Advisory -- ENGL 1A READING AND COMPOSITION Write a documented research paper of at least 1000 words that includes: a sophisticated introduction, multiple body paragraphs, Gain an understanding of how to identify molecular and ionic compounds and the specific bonding types that occur in these compounds.

 and conclusion a clearly defined, arguable thesis sentence 	 Describe covalently bonded compounds using Lewis structures. Apply the definition of acids and bases to the understanding of pH and acid related problems.

ESTABLISHING PREREQUISITES OR COREQUISITES

Every prerequisite or corequisite requires content review plus justification of at least one of the seven kinds below. Prerequisite courses in communication and math outside of their disciplines require justification through statistical evidence. Kinds of justification that may establish a prerequisite are listed below.

Check one of the following that apply. Documentation may be attached.

- The prerequisite/corequisite is required by law or government regulations. Explain or cite regulation numbers:
- The health or safety of the students in this course requires the prerequisite.
 - Justification: Indicate how this is so.
- 3. _____ The safety or equipment operation skills learned in the prerequisite course are required for the successful or safe completion of this course.
 - Justification: Indicate how this is so.
- _ The prerequisite is required in order for the course to be accepted for transfer to the UC or CSU systems. Justification: Indicate how this is so.
- Significant statistical evidence indicates that the absence of the prerequisite course is related to unsatisfactory performance
 - in the target course.
 - Justification: Cite the statistical evidence from the research.
- 6. __X__ The prerequisite course is part of a sequence of courses within or across a discipline.
 - Chem 10 is a recommended prerequisite for chem 3A.
- 7. ____ Three CSU/UC campuses require an equivalent prerequisite or corequisite for a course equivalent to the target course:
