

Math11-Elementary Statistics

Course Syllabus-SPRING 2022 Section #51781

Class:

In Person: All class materials are located on Canvas and in MyLab Math.

Instructor:

Mr. Garcia

e-mail:

jose.garcia@reedleycollege.edu or jogarciamath@gmail.com

MyMathLab ID: garcia20676

Meeting dates:

Room	Dates	Time
CCI-206	T	4:00 p.m.-5:50 p.m.
CCI-206	TH	4:00 p.m.-5:50 p.m.

Course Communication Policy:

When you log in to view your course content in Canvas, you will find a welcome announcement in the home page. In there you will find the Syllabus with a link and the MyLab Math instructions hand out with a link as well. Then under modules you will find a road map of the Online Math course broken down into modules. In each of the modules you will find directions on what to do each week. Make sure to carefully read the instructions and don't just rely on the calendar of events because you might miss critical details on each assignment.

I will be communicating with you via inbox Canvas messaging to inform you about important assignments, quizzes or exams. It is your responsibility to read each announcement to keep up with the course progression and don't follow behind this course.

You can also reach me at jose.garcia@reedleycollege.edu or at jogarciamath@gmail.com. I will respond to your concerns or questions within 24 hours Monday-Saturday. I may be able to respond to you on Sundays upon an opportunity but I don't promise anything. If you don't hear from me within 24 hours then resend your message via Canvas or email. Remember, this the best communication method to reach me.

Course information:

Welcome to Math 11, Elementary Statistics! Our section number is 51781. We meet in person from 4:00 p.m.-5:50 p.m. and the rest of dates of the week you will learn on your own.

Course Description:

This course is an introduction to statistical methods and techniques with applications in the fields of business, behavioral and social science, as well as in science, technology, engineering, and

mathematics. Topics include descriptive measures of central tendency and variability, probability, binomial and normal distributions, random variables, sampling, estimating, hypothesis testing (parametric and nonparametric), correlation and regression.

Basic Skills Advisories:

English 1A

Subject Prerequisites:

Math 103 or AB 705 Placement

Credits:

4 units

Optional Textbook:

Ron Larson, Elementary Statistics, Pearson, 7th Edition, 2017.

Student Learning Outcomes:

Upon completion of this course, students will be able to:

1. Organize, analyze, and utilize appropriate methods to draw conclusions based on sample data by using tables, graphs, measures of central tendency, and measures of dispersions.
2. Apply concepts and terminology of statistics.
3. Implement the rules of probability.
4. Collect data, interpret and communicate the results using statistical analyses such as confidence intervals, hypothesis test, and regression analysis.

Course Objectives:

In the process of completing this course, students will:

1. Distinguish among different scales of measurement and their implications;
2. Identify the standard methods of obtaining data and identify advantages and disadvantages of each;
3. Interpret data displayed in tables and graphically;
4. Calculate measures of central tendency and variation for a given data set;
5. Apply concepts of sample space and probability;
6. Calculate the mean and variance of a discrete distribution;

7. Calculate probabilities using normal and t-distributions;
8. Distinguish the difference between sample and population distributions and analyze the role played by the Central Limit Theorem;
9. Construct and interpret confidence intervals;
10. Determine and interpret levels of statistical significance including p-values;
11. Interpret the output of a technology-based statistical analysis;
12. Identify the basic concept of hypothesis testing including Type I and II errors;
13. Formulate hypothesis tests involving samples from one and two populations;
14. Select the appropriate technique for testing a hypothesis and interpret the result;
15. Use linear regression and ANOVA analysis for estimation and inference, and interpret the associated statistics; and
16. Use appropriate statistical techniques to analyze and interpret applications based on data from disciplines including business, social sciences, psychology, life science, health science, and education.

Course Content Outline:

A. Introduction to Statistics

1. Summarizing data graphically and numerically: Frequency distributions and Graphs
2. Descriptive statistics: Measures of central tendency: mean, median, mode, measures of variation: variance, standard deviation, quartiles, range, relative position, levels/scales of measurement

B. Probability

1. Sample spaces and probability
2. Random variables and expected value
3. Sampling and sampling distributions
4. Discrete distributions – Binomial
5. Continuous distributions – Normal

C. Sampling Theory

1. Simple random sample
2. Central Limit Theorem

D. Estimating Population Parameters

1. Estimation and confidence intervals from a small or large sample.
2. Sample size.

E. Hypothesis Testing (Parametric/Nonparametric)

1. One population, one- and two-sided tests, z-test for means and proportions, and t-test for means (independent and dependent samples)
2. Two populations, sampling distributions
3. Chi-square (Goodness of Fit and Contingency Tables)

F. Correlation and Simple Linear Regression

1. Correlation coefficient
2. Regression coefficient
3. Test of hypothesis about the value of correlation/regression coefficient.
4. Analysis of variance (ANOVA)

G. Applications/Technology

1. Applications using data from disciplines including business, social sciences, psychology, life science, health science, and education
2. Statistical analysis using technology such as SPSS, EXCEL, Minitab, or graphing calculators

Required Materials:

- Paper 8 ½" by 11"
- Pencils
- TI-84 or PLUS (Can be checked out at Reedley College Library with your RC ID)

Assignments:

The assignments will account for 25% of your grade. Each homework assignment will be completed online and the assignments can be found at the MyLab Math website, www.pearsonmylabandmastering.com. You may work ahead if you like; all homework assignments for the entire chapter will be made available to the student on the weekly basis. **It is important to stay current to be successful in this course!** Each assignment has a due date and time. Any late assignment will receive credit based on the student effort.

Importance Notice:

While working on an assignment, you do not have to complete an entire assignment in one seating. If you choose to stop for a while, make sure to click **SAVE** icon and the program will save your work. You can come back to work on the assignment and continue where you left off at another convenient time.

Tutorial Services:

[Tutoring Services](#): Math Center in Room MSC1 123 at Reedley College

Hours:

- Monday 9am-3pm
- Tuesday 9am-8pm
- Wednesday 9am-3pm
- Thursday 9am-8pm
- Friday 9am-1pm

If you have questions, contact The Math Center Coordinator, Becky Reimer, at rebecca.reimer@reedleycollege.edu or call (559) 638-0300 ext. 3158

- YouTube also has many good videos for help.
- [Video for the Academic Support Centers](#)
- **Note:** If you have any questions you would like to ask of me, your, please ask me during class time or contact me via email and I will do my best to help you.

Assignment Notebook:

ALL online assignments problems are to be worked out completely, with all work shown in your 8 ½" by 11" listed in the materials list. The purpose of this is to help you get your solutions written out so you can have a deeper understanding of concepts being learned.

Math Discussions (Optional):

We will have a Math Thinkers Forum Q & A available for you on the weekly basis to post a question and answer any question that you might have regarding a topic or about his course. We might

possibly have math discussion within Canvas to create a math learning community as well as to learn from each other and grow in our knowledge of math concepts. Your grade will depend on the requirements of your participation posts and each math discussion will be graded on a rubric or based on effort. This will go towards your quiz categories.

Quizzes:

There will be online **weekly** homework assignments quizzes. These quizzes will be every two or three sections of content covered within a chapter. The quizzes will account for 10% of your grade.

Attendance and Drop Policy:

Actively participation is one of the Key pillars of your success. Everyone can learn math, but don't do it alone! The first assignment for this course is to introduce Yourself 1) Introduce yourself to the rest of your classmates including your name, how are you feeling, and be confident in sharing some personal information you would like us to know about you. 2) Explain in a brief summary what is your dream goal and what college you are planning to attend. 3) Share some of your insights about how you feel taking this face-to-face course. What are your concerns? How confident do you feel in passing this class? How can you become successful in this Math course? Share your sincere opinions.

This activity of introducing yourself should be done in class. If you don't show up to class or if you don't do it then it will be considering a "no show" and you will be dropped from this course.

Students who do not sign up at www.pearsonmylabandmastering.com and complete the first two assignments (Sections 1-1 and 1-2 for example) within the **first two weeks (January 18, 2022 by 11:59pm in MyLab Math)** of instruction will be dropped. MyMathLab will allow you to enroll on their site with a temporary access without buying the access code.

Any student who enrolls with a temporary access code will be required to have purchased the access code and be permanently enrolled in the MyLab Math course by **third week [January 29, 2022]**. Failure to do so will result in a drop from the course!

Exams:

- There will be several chapter exams including Chapter 1, Chapter 2, Chapter 3, Chapter 4, Chapter 5, Chapter 6, Chapter 7, and content covered in Chapter 9 will be on the Final Exam. Also, the exams will cover one-chapter material.
- If you absolutely cannot take a test on the day of an exam is scheduled, you must discuss with me the possibility of taking the exam **early. Please send me an email so I can make the necessary changes and you don't get a zero.**

Important Dates:

January 11, 2022	(T)	First day of school
January 17, 2022	(M)	Martin Luther King, Jr. Obs. (no classes held, on campus closed)
January 21, 2022	(F)	Last day to drop a SPRING 2022 full-term class
January 21, 2022	(F)	Deadline to enroll in MML and complete at least two assignments
January 28, 2022	(F)	Last day to register for a SPRING 2022 full-term in person
January 28, 2022	(F)	Last day to drop a Spring 2022 full-term class to avoid a "W" in person
January 28, 2022	(SA)	Deadline to permanently enrolled in MyLab Math

January 11, 2022	(T)	First day of school
January 30, 2022	(SU)	Last day to drop a SPRING 2022 full-term class to avoid a "W" on WebAdvisor
February 11, 2022	(F)	Last day to change a SPRING 2022 class to/from Pass/No-Pass grading basis
February 18, 2022	(M)	Lincoln's Birthday Obs. (No classes held, on campus closed)
February 21, 2022	(M)	Washington Day/Pres. Day (No classes held, on campus closed)
March 11, 2022	(F)	Last Day to drop a full-term class (letter grades assigned after this date)
April 11-April 18, 2022	(TH-F)	Spring Break (No classes held, on campus closed)
May 16-20, 2022	(M-F)	Spring 2022 Final Exams Week

College Policies:

Behavioral Standards:

Your classmates and I would greatly appreciate that you take care of any personal needs (i.e., using the restroom, getting a drink, sharpening a pencil) before class begins. Please turn your phone off, put it out of sight, and remove any earbuds when you come into class. You may **not** use your phone as a calculator while doing class work or during testing time. Make sure to follow the rules for this course provided to you by the instructor in separate document and the school policies to ensure success in this course. I am looking forward to have a good semester with all of you!

Special Needs Requests:

If you have a verified need for an academic accommodation or materials in alternate media (i.e., Braille, large print, electronic text, etc.) per the Americans with Disabilities Act (ADA) or Section 504 of the Rehabilitation Act, you are encouraged to provide me with your notification of authorized services form from DHS counselor and consult with me immediately so that arrangements can be made.

Academic Integrity:

You are expected to be honest. In this course, that primarily means you should never submit work that is not your own. This does not mean that you are not allowed to work with other students. I encourage you to collaborate on homework problems! It is often more fruitful and enjoyable to work with other people when trying to figure something out. They can give you a fresh insight or different perspective on the problem. Conversely, explaining your idea to another person forces you to clarify your thoughts and can help to highlight flaws you may have previously overlooked. However, if you work with others to come up with a solution, afterward you should write up your work on your own. You should not base your homework on another's student's homework, and never put your name on something you do not understand.

Below is the official School policy on academic dishonesty, cheating and plagiarism.

Cheating:

Is the act or attempted act of taking an examination or performing an assigned, evaluated task in a fraudulent or deceptive manner, such as having improper access to answers, in an attempt to gain an unearned academic advantage. Cheating may include, but is not limited to, copying from another's work, supplying one's work to another, giving or receiving copies of examinations without an instructor's permission, using or displaying notes or devices inappropriate to the conditions of the

examination, allowing someone other than the officially enrolled student to represent the student, or failing to disclose research results completely.

Plagiarism:

Is a specific form of cheating: the use of another's words or ideas without identifying them as such or giving credit to the source. Plagiarism may include, but is not limited to, failing to provide complete citations and references for all work that draws on the ideas, words, or work of others, failing to identify the contributors to work done in collaboration, submitting duplicate work to be evaluated in different courses without the knowledge and consent of the instructors involved, or failing to observe computer security systems and software copyrights.

Incidents of cheating and plagiarism may result in any of a variety of sanctions and penalties, which may range from a failing grade on a particular examination, paper, project, or assignment in question to a failing grade in the course, at the discretion of the instructor and depending on the severity and frequency of the incidents.

Personal and Technology Emergencies:

I am well aware that sometimes emergencies occur. To account for these unexpected events, I have made the following allowances:

- The lowest **two homework assignments grades** will be dropped.
- The lowest **two quiz grades** will be dropped.
- The final exam will replace the lowest exam (or a zero score if you miss an exam) if the final exam score is higher.

Final Exam:

The final may be used to replace a low exam score or a missed exam. The final may not be used to replace the homework assignment grade, or quiz grade.

Grading Scale:

Letter Grade	Percent Range	Categories	Percent of Grade
A	90%-100%	Assignments	25%
B	80%-89%	Quizzes	10%
C	68%-79%	Exams	65%
D	55%-67%		
F	0%-54%		

Example:

If your homework assignments average is 85, the average of your quizzes is 70, the average of the **average of your exams and the final exam 76**, then you would compute your grade as follows;

$$(.25)(85)+(.10)(70)+ (.65)(76) = 21.25 + 7 + 49.4 = 78.65 \text{ or } 78.7\%$$

- Your grade will then be determined by reading the above chart with the grading scale. Thus, your grade in the above example will be 78.7% or C.
- Note: To receive college credit you need at least 68% or C, or better to pass.
- **What is your goal for this course? My goal for this course is**

Late Work policy:

It is important to stay current to be successful in this course. Each assignment will have a due date and time. I will be accepting any late assignment BUT you will be taken off 10% on each late assignment. Hence you can still earn 90% credit of each original assignment.

There will be online quizzes. In case of an emergency, you missed a quiz deadline, personal emergency or internet connectivity issue you have to let me know so I can do a new extension.

For exams, I understand that we all have personal emergencies so for this case you may contact me via inbox **Canvas or email** notifying me why you are not able to take the test on due date and time. Please be sure to state in your message, Hello Mr. Garcia, or Good morning Mr. Garcia, Good afternoon Mr. Garcia, or Good evening Mr. Garcia depending on the time of day and start explaining your concerns or questions. I will get to you in a given opportunity and will consider your situation and will provide a reasonable extension according your situation.

Course Schedule:

(Subject to change)

Week 1: Introduction, Overview of the course, An Over view of Statistics, and Data Classification (Chapter 1)

Week 2: Data Collection, Experimental Design and Chapter 1 Test

Week 3: Frequency Distributions & their Graphs, More Graphs & Displays, and Measures of Central Tendency (Chapter 2)

Week 4: Measures of Variation and Measures of Position (Chapter 2)

Week 5: Chapter 2 Test and Basic Concepts of Probability and Counting (Chapter 3)

Week 6: Conditional Probability & the Multiplication Rule, The addition Rule (Chapter 3)

Week 7: Additional Topics in Probability and Counting, and Chapter 3 Test

Week 8: Probability Distributions and Binomial Distributions (Chapter 4)

Week 9: More Discrete Probability Distributions and Chapter 4 Test

Week 10: Introduction to Normal Distributions and Standard Normal Distribution, Normal Distributions: Finding Probabilities (Chapter 5)

Week 11: Normal Distributions: Finding Values, Sampling Distributions and the Central limit Theorem (Chapter 5)

Week 12: Normal Approximation to Binomial Distributions and Chapter 5 Test.

Week 13: Confidence intervals for Mean (σ known) and Confidence Intervals for the Mean (σ unknown) (Chapter 6)

Week 14: Confidence Intervals for Population Proportions and Chapter 6 Test

Week 15: Introduction to Hypothesis Testing and Hypothesis Testing for the Mean (σ known) and Hypothesis Testing for the Mean (σ unknown) (Chapter 7)

Week 16: Hypothesis Testing for Proportions and Chapter 7 Test

Week 17: Correlation and Linear Regression (Chapter 9)

Week 18: Cumulative Final Exam with Chapter 9 content covered

Notice: *This Syllabus is subject to change at the discretion of the Math instructor.*
