

**HONORS 3C**  
**Honors Forum – Natural and Biological Sciences**  
*Fall 2023*  
Section #54050

**Contact Information:**

**Instructor Name:** Kurt Shults

**Email:** [kurt.shults@reedleycollege.edu](mailto:kurt.shults@reedleycollege.edu)

Office Telephone: (559) 494 - 3000 ext. 3664

**Class Meetings:** Mondays/Wednesdays 10:00 – 10:50am in MSCI 124 (Math Center)

**Office Hours:**

Mondays/Wednesdays: 9:00 – 10:00am ; 11:00 – 12:00pm in the Math Center

Fridays: 10:00 – 11:00am via Zoom <https://scccd.zoom.us/j/83598449704>

These are my official office hours, but you can find me at many other times!

***Send me an email or a Canvas message to set up a meeting!***

**Course Communication Policy:**

An important method of communication will be the feedback that I provide when I grade your assignments. Whenever you have a new grade posted, read any comments that I have posted regarding your work. This feedback will be very important for you to know what you have done well and what needs improvement.

Please contact me with any questions or concerns you have about this class. Contact me through an email or Canvas message. I will reply within 24 hours on weekdays. I may be able to respond on weekends as well, but it is not guaranteed. (If I do not respond within 24 hours, please resend your message.)

**Welcome to the Natural and Biological Sciences Honors Forum!**

I want to welcome you to Honors 3C! This is a fun and interesting course. You will each choose a topic in which you are interested and develop a research question. We will help each other as you each work on pursuing the research to answer that question. We have some challenging work ahead of us, but we will do it together!

**Catalog Description:**

This is an interdisciplinary investigation of a contemporary issue through the perspective of those disciplines considered part of the natural and biological sciences. Enrolled students will be required to present their research as the culminating portion of the course.

## What does it mean to be a student in an Honors class?

Honors students have the following attributes:

1. a higher degree of participation and involvement in the class
2. a higher standard of performance than regular students
3. an ability to comprehend more advanced supplemental reading, especially of primary sources
4. a demonstration of stronger enhancement of skills in critical thinking, analysis, and interpretation
5. an ability to comprehend a greater depth and breadth of subject matter, especially requiring synthesis of different perspectives or points of view

## No Required Textbook

### Extra Faculty Reviewer:

Extra faculty advising will be very helpful as you progress with this project. I will provide you with as much guidance as I can, but you may want to ask another faculty member to provide additional insight on your work. You may choose an instructor who is knowledgeable on your research topic, or you may choose one that can just provide general guidance.

### Grading:

15%	Participation and Assignment Grade
15%	Research Proposal
	<i>First Draft (3%)</i>
	<i>Second Draft (4%)</i>
	<i>Final Draft (8%)</i>
15%	Individual Progress Meetings
20%	Class Presentations
	<i>Initial Idea presentation (3%)</i>
	<i>Proposal presentation (4%)</i>
	<i>Research Update presentation (5%)</i>
	<i>Final Presentation (8%)</i>
10%	Public Presentations
	<i>Midterm Research Presentation (5%)</i>
	<i>Final Research Presentation (5%)</i>
15%	Research Paper
	<i>Draft Paper (5%)</i>
	<i>Final Paper (10%)</i>
10%	Quality of Research

### Participation and Assignments:

The major thrust of this course is the development of a research report that combines computational analysis with academic research. During our class meetings, we will help each other as we work on our projects. During certain meetings, you will be asked to provide an update on your progress. During other meetings, you will be expected to help provide guidance to other students with their projects. Each week, you will be earning a grade based upon your progress on the project. Additional assignments that arise will be incorporated in this grade.

### **Research Proposal:**

The first step in academic research is to clearly define what you are researching. Our first goal will be for each of you to create your research proposal. In order to create the very best possible proposals, we will have at least three rounds of drafts to create our final draft. Through the creation of these proposals, you will both refine your research question and fine tune your research procedure.

### **Individual Progress Meetings:**

I want to help each of you as much as I possibly can on this project. We will have several required individual meetings between each of you and myself, during which we can discuss your progress and decide on the direction of your research. Your grade for this section will be based upon your attendance at and your appropriate preparation for these meetings

### **Class Presentations:**

During academic research, you are expected to be able to present information about your research in various settings. During the semester, you will have several opportunities to present aspects of your research. First, you will give a short presentation on the initial idea of your research topic. Following that, you will present your research proposal to the class. During the time that you are performing your research, you will provide a formal update to the class. Finally, you will give a final presentation during a time organized for the class.

### **Public Presentations:**

Research is a central theme of the Reedley College Honors Program. The program hosts two public events during the semester at which the honors students present their research. Participation at these events are a requirement for this course.

### **Research Paper:**

You will also present your research results through a research paper. The paper will include the following sections: Abstract, Introduction, Methodology, Results, and Conclusions. Both a draft and final paper will be graded.

### **Quality of Research:**

A portion of your grade is based upon the level of quality of your research project. This grade will take into account your full work of the semester. The grade is based upon the following:

- Developing a clear research question
- Having well-defined goals for your research
- Meeting goals of research proposal
- Following proper research methodology
- Showing depth and rigor in research
- Displaying an understanding of the context of your research
- Dealing with questions that arise from your research
- Sharing an enthusiasm on your research topic
- Clearly communicating your research results

### **Grading Scale:**

90-100%	A
80-89.9%	B
70-79.9%	C
60-69.9%	D
<60%	F

## **Academic Dishonesty**

Students at Reedley College are entitled to the best education that the college can make available to them, and they, their instructors, and their fellow students share the responsibility to ensure that this education is honestly attained. Because cheating, plagiarism, and collusion in dishonest activities erode the integrity of the college, each student is expected to exert an entirely honest effort in all academic endeavors. Academic dishonesty in any form is a very serious offense and will incur serious consequences.

**Cheating** is the act or attempted act of taking an examination or performing an assigned, evaluated task in a fraudulent or deceptive manner, such as having improper access to answers, in an attempt to gain an unearned academic advantage. Cheating may include, but is not limited to, copying from another's work, supplying one's work to another, giving or receiving copies of examinations without an instructor's permission, using or displaying notes or devices inappropriate to the conditions of the examination, allowing someone other than the officially enrolled student to represent the student, or failing to disclose research results completely.

**Plagiarism** is a specific form of cheating: the use of another's words or ideas without identifying them as such or giving credit to the source. Plagiarism may include, but is not limited to, failing to provide complete citations and references for all work that draws on the ideas, words, or work of others, failing to identify the contributors to work done in collaboration, submitting duplicate work to be evaluated in different courses without the knowledge and consent of the instructors involved, or failing to observe computer security systems and software copyrights. Incidents of cheating and plagiarism may result in any of a variety of sanctions and penalties, which may range from a failing grade on a particular examination, paper, project, or assignment in question to a failing grade in the course, at the discretion of the instructor and depending on the severity and frequency of the incidents.

**Attendance:** Class attendance will be recorded. If you miss more than two class sessions, you may be dropped. Course withdrawals, however, are ultimately the responsibility of the student.

### **Accommodations for Students with Disabilities:**

If you have a verified need for an academic accommodation or materials in alternate media (i.e., Braille, large print, electronic text, etc.) per the Americans with Disabilities Act (ADA) or Section 504 of the Rehabilitation Act, please contact me as soon as possible.

---

## **COURSE OUTCOMES:**

1. place a focus of research within a natural science and biology-based academic context.
2. explain how different disciplines can contribute information to a common research question.

## **COURSE OBJECTIVES:**

In the process of completing this course, students will:

1. Build a background in a natural and/or biological science that is broad enough to contribute to a multi-discipline research project.
2. Develop interdisciplinary hypotheses and questions about a focus of research with guidance from the instructor.
3. Write appropriately documented essays which define, evaluate, interpret, and argue interdisciplinary focus of research.
4. Synthesize information and knowledge using skills obtained from separate disciplines within the Natural and Biological Sciences.
5. Practice critical thinking skills in evaluating and presenting research.
6. Experience an integrated academic atmosphere in an effort to stimulate intellectual curiosity and university-level discussion on a particular topic or theme.
7. Lead/participate in discussions to investigate questions and concerns regarding the identified focus of research.
8. Revise "first thoughts" or original hypotheses in light of deeper research and in collaboration with the instructor, classmates, and experts in the field.

**Tentative Course Schedule:**

<b>Date:</b>	<b>Activity:</b>
Week 1	Introductions, Interests, and Research Topics
Week 2	Initial Background Research
Week 3	Initial Idea Presentations; 1 <sup>st</sup> Draft Proposals are Due
Week 4	Individual Meetings
Week 5	2 <sup>nd</sup> Draft Proposals are Due
Week 6	Proposal Presentations
Week 7	Final Proposals are Due
Week 8	Individual Meetings
Week 9	Midterm Public Presentations
Week 10	Discussions on Research
Week 11	Research Update Presentations; Individual Meetings
Week 12	Research Update Presentations
Week 13	Work on Research Papers and Presentations
Week 14	Discussions on Research
Week 15	Draft Research Papers are Due
Week 16	Final Presentations
Week 17	Final Public Presentations / Final Research Papers are Due
Week 18	Make-Up Work
